

Author Guidelines for Tutorials

About Tutorials

Popular with our readers, tutorials synthesize research and theory on a topic, then present practical applications of that material as “lessons” that readers can apply in their work.

Examples of tutorials recently published in the *Transactions* include translating surveys, using search engine optimization, contrasting the difference between training and professional and technical communication, and integrating rich media into training modules.

Note that we do not accept tutorials on teaching; those should be presented as teaching cases.

Please limit the word count to no more than 7500 words, excluding references.

Guidelines for Tutorials

Formatting References	Follow the IEEE style for formatting references, which differs from the APA and MLA styles that are more widely used among professional communicators. For instructions on formatting references, see the document entitled TPC Citation Style that is linked from https://procomm.ieee.org/transactions-of-professional-communication/for-prospective-authors/guidelines-to-follow/ .
Formatting Text	Please use the titles below as your major section headings and address the issues below in the corresponding section.
Abstract	Structure the abstract (between 200 and 250 words) by subheadings that address all sections required of tutorials below, as well as implications for practice, research, and/or education.
Introduction	<p>Explain what the tutorial is about and why it is relevant to readers.</p> <p>State the research questions underlying the tutorial and provide a preview of the main sections of the article, using terminology that closely matches the headings.</p> <p>If human subjects were involved in the preparation of the tutorial, explicitly indicate that an Institutional Review Board or its equivalent has approved the study or that it was exempt.</p>
Key Concepts	<p>Present the key concepts that provide the context for the tutorial.</p> <p>Include both peer-reviewed and popular literature in your discussion of the concepts. Note that many readers will be more familiar with the popular sources—and in some areas, the advice in those sources differs from that in the peer-reviewed literature (and, in some cases, the two</p>

sources contradict one another).

Make sure that you include sources from the professional communication literature to situate the tutorial within the larger conversation in the primary field of study for this journal.

Begin with a short paragraph that provides a preview of the section.

Next, describe the framework or perspective that guided your approach to this topic, such as a genre ecologies framework, a user-centered design perspective, or a theory of active learning. This provides readers with some insights into the thinking underlying the tutorial.

Next, briefly explain how you selected literature to include and state explicitly which topics were chosen.

Theme by theme, name and define relevant issues, practices, theories, and/or research that underlie the lessons in this tutorial. Make sure to define terms and concepts.

Key Lessons

Present the advice of the tutorial in this section. Note: This is the “meat” of the tutorial and should be the longest section.

Begin with a short paragraph that previews the section.

Present 3 to 7 lessons or tips to readers. Each lesson presents an evidence-based heuristic (such as “Write in the active voice” or “Limit the number of steps in a procedure to 10.”)

Explain the lesson, defining all technical terms and concepts.

- Provide guidance in application—with specifics and tips.
- Provide an example.

Note: Ideally, use the sample example throughout this section to show how different lessons are applied across a single case.

Implications for Practice

This section closes the article by describing the broader implications of the tutorial to the practice of professional communication.

Describe the implications to practice for applying the lessons of the tutorial. Possible implications (include one or more):

- Challenges to anticipate when implementing these concepts
- Quantitative results of real-world efforts to apply these lessons
- Qualitative results of real-world efforts to apply these lessons
- Reactions of professionals when their organizations have applied these concepts

Do not place an additional set of Conclusions at the end of the article.
